PREFACE

The Annual Planning Information (API) report contains a formidable array of information including not only traditional economic analysis, but also data necessary for the preparation of the SDA Job Training Plans required by the Job Training Partnership Act and for the day-to-day operation of employment and training programs at the local level.

Prepared by the Arizona Department of Economic Security through the support of the Arizona State Job Training Coordinating Council, this API publication is provided to all JTPA Service Delivery Areas and others in the state to be used in program planning and evaluation, economic analysis and development, resource allocation and funding, job search assistance, job development and placement, employability growth, vocational counseling, and overall program administration.

The method used to generate most of the projections in this publication is based on a "census-share" approach. The 1980 Census serves as base data for race, ethnic, age, and sex breakdowns from which 1980 percentages, or census shares, are calculated and applied to 1987 and 1988 total state or county projections. Of course, the percent distributions that existed in 1980 will not continue throughout the decade. However, at present, we have no other source to utilize as a base. Although a mid-decade census was conducted in several jurisdictions, the data are not available in the same breakdowns and geographic areas as are needed for JTPA purposes.

Projections to the years 1987 and 1988 refer to annual averages when pertaining to labor force data, but refer to July of the respective years when the data are in relation to population figures.

To the extent practical, all the data contained herein have been broken down to the SDA level. Efforts are continuing to provide each SDA with as much labor market information as possible. The appendices contain data at the county level.

The Research Administration of DES is ready to assist in the use of this publication. If any SDA, Private Industry Council, or other interested party wishes to have a technical assistance program concerning labor market information presented in its area, please contact Barbara Keene at 255-3871. Other questions regarding the API may also be directed to her.

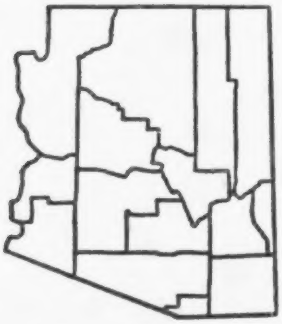
STATE OF ARIZONA



Arizona's economy over the last three years has been one of the most dynamic in the country. With eight months of data in for 1986, there were few surprises. Manufacturing employment continued to grow, although at a slower rate than expected for the first two-thirds of the year. In August, Arizona's manufacturing growth comprised a large share of the total national increase in manufacturing employment. This is clear evidence of a dynamic growing economy, as is the nearly continuous growth in construction employment since 1982. Growth in construction has been fueled by lower interest rates and higher population growth.

We forecast the unemployment rate to continue to hold near 6.5 percent through the end of 1986 before dipping to 6.1 percent in 1987 and 5.8 percent in 1988. Wage and salary employment is expected to average about 1.345 million in 1986, a 5.2 percent increase over 1985. This rate of growth is modest compared to the growth rates of 9.6 percent and 8.1 percent recorded in 1984 and 1985. Looking further ahead, we expect the growth rate to slow even more, but to be about 4.0 percent in both 1987 and 1988. These growth rates, while not spectacular, should definitely be greater than the national average.

Out of total Arizona wage and salary employment of 1.345 million, Maricopa County will account for about 888.0 thousand (66 percent), followed by Pima County with about 244.2 thousand (18.2 percent), and the nonmetropolitan counties with about 212.8 thousand (15.8 percent). During the last ten years, Maricopa County has experienced relatively faster growth than Pima County or the state's rural counties. This pattern is expected to continue.

The largest source of new jobs to be created in the next two-and-one-half years will be the trade and services industries. More than 100,000 people will be added in these two industries by 1988. The rate of growth, however, will be well below that observed during the 1984-1985 period. Arizona's rapid population growth, combined with a generally bright outlook for tourism, should generate a strong increase in retail trade and population-serving activities such as financial services, health care, personal services, hotels and resorts, and state and local government. These industries will play an increasingly important role in the growth of Arizona's economy in the future.

Despite high expectations of "high tech," the manufacturing industry has had mixed results so far. Defense contractors have expanded very rapidly, while nondefense electronic manufacturers have reduced work hours and laid off workers. The aggregate effect has been a net gain in manufacturing employment. Electronics manufacturing should see a recovery in sales of their products which have been depressed by intense foreign competition and slower-than-expected growth in demand. A lower-valued dollar and some real attempts to lower costs should allow these firms to add workers by the end of this year. In addition, the producers of defense-related products should continue to hire as rapidly as last year unless cutbacks are forced by the Gramm-Rudman-Hollings (GRH) proposal to balance the budget. As a result, manufacturing should be able to grow modestly in 1986, followed by greater growth (more than 3.0 percent) in both 1987 and 1988.

Growth in construction will be spurred by lower interest rates and strong population growth. On the one hand, the widely reported surplus of office space in the Phoenix area has resulted in lower growth in commercial construction employment, while rapid population growth, along with lower interest rates, has sustained residential construction employment. Massive road building activities should also help to offset losses caused by less office construction and recent layoffs at the Palo Verde Nuclear Power Plant in the Phoenix area. The number of jobs in construction is expected to rise only 4.2 percent this year which will be greater than the expected 2.6 percent in 1987. Construction employment is forecast to bounce back again in 1988 with nearly 4.0 percent growth.

Finance, insurance, and real estate is expected to set a record with growth of about 12.0 percent in 1986, followed by growth of about 4.0 to 5.0 percent in 1987 and 1988. The continued growth of this industry stems from low interest rates, consumers refinancing existing loans and mortgages, population growth, and the expansion of out-of-state financial institutions into the state.

Government and transportation, communications, and public utilities (TCPU) are all expected to have modest growth in the next two-and-one-half years. Government employment growth will be influenced by the GRH legislation for a balanced budget. Employment growth will be primarily in schools and state and local governments. Growth in federal employment will be mostly related to the military. TCPU will see growth mainly in the transportation sector, particularly in trucking companies.

The mining industry is expected to lose about 2,700 workers by 1988, continuing the losses in copper mining. The declining employment in this industry is due to intense competiton from non-U.S. producers and low copper prices in international markets. This situation is expected to continue for at least the next two years.

Arizona's economic future continues to look good. Employment growth should be strong in 1986, followed by more modest growth in 1987 and 1988. The unemployment rate is expected to remain near 6.5 percent this year and should fall during the following two years. In the long run, we should continue to see growth rates higher than those of nearly all of the other states in the United States.

APACHE COUNTY SERVICE DELIVERY AREA

Unemployment in Apache County declined from mid-1985 to mid-1986, partly because of a decline in their labor force during those 12 months and partly because of increased employment opportunities in the construction of power plants in Springerville and near St. Johns. The major reason for high unemployment in the county is the remoteness of the region from major metropolitan areas.

The economic base of Apache County consists mostly of government, services, and wood products manufacturing. However, power plant construction has played an important role in the county's economy in recent years.

Construction employment increased in the county during the 12 months ending July 1986 as construction of Unit 2 of the Springerville generating station was underway with a completion date of 1989. The construction of Unit 3 at the Coronado generating station near St. Johns is also creating additional demand for construction workers. As the power plants are completed, operations and maintenance workers will be hired, but the number of jobs available will be much lower than during the construction phases. Some construction workers may find work in the southern portion of the county, where home building activity has been expanding. Other construction workers can be expected to leave the county upon completion of the projects.

Tourism is very important in Apache County. Employment opportunities in trade and service areas depend on the level of tourist activities along Interstate 40 and in the White Mountains. Tourism has grown moderately this year and should continue to expand in the future. As a result, some job openings should be created for sales workers, cashiers, food service workers, managers, and maintenance workers.

Apache County's distance from major sources of employment has contributed to one of the highest rates of unemployment in the state. Unemployment will probably remain high, unless unforseen developments cause the rate of employment growth to increase.

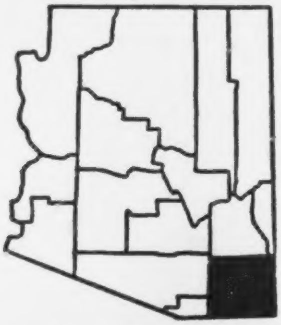
COCHISE COUNTY SERVICE DELIVERY AREA



Cochise County has experienced an increase in wage and salary employment of 1,325 over the 12 months ending in July 1986. The unemployment rate, also, has gone down from 7.9 percent in July 1985 to 7.6 percent in July 1986. In other words, employment growth was enough to keep up with the growth in labor force. The labor force had increased by more than 3,000 over that period.

The economic base of the county consists of agriculture, trade, services, manufacturing, and government, while government continues to be the major source of employment in the county. The majority of these government jobs are related to Fort Huachuca (the largest military installation in the county), Cochise Community College, and the new prison facilities near Douglas. The expansion at Fort Huachuca is expected to add jobs in military equipment as well as boosting other sectors of the economy.

More recently, agriculture has played an important role in determining the level of economic activities in the county. Employment opportunities are expected to expand in this sector with the addition of about 1,500 new year-round agricultural labor jobs over the next ten years. These jobs will be created with the expansion of fruit orchards near Willcox. The development of fruit orchards and the building of cold storage facilities in this area will provide additional jobs in packing, processing, and warehousing, although these jobs will be seasonal as is harvesting.

Tourism also adds basic dollars to the local economy. General improvements in the national and state economies will be reflected in increased tourist activity. Construction of a new RV park and motels are underway which should capture the nonresident dollars. Additionally, families who visit inmates at the new prison facility will add visitor dollars. Finally, should the rate of exchange of pesos to dollars improve, more border trade will take place which in turn will create employment opportunities in the retail business. The opening of a new life center in Sierra Vista will create additional demand for nurses, nursing aides, and other related occupations. However, the ongoing problem in the copper industry will reduce employment in the depressed area of the county for the forseeable future.

Overall, the outlook for Cochise County appears to be good. However, future employment growth will largely depend on the county's ability to diversify its employment base.

PUBLIC ASSISTANCE RECIPIENTS*
COCHISE COUNTY - FY 1986 MONTHLY AVERAGE

Combined Programs (include Aid to Families with Dependent Children, General Assistance, and Supplemental Payments Programs):

	TOTAL	MALE	FEMALE
Recipients	2,567	863	1,704

	AGE DISTRIBUTION				
	UNDER 14	14-15	16-21	22-54	55 AND OVER
Recipients	1,382	137	257	721	70

Aid to Families with Dependent Children (AFDC):

	AGE DISTRIBUTION					
	TOTAL	UNDER 14	14-15	16-21	22-54	55 AND OVER
Recipients	2,425	1,380	137	252	639	17

General Assistance Program (GA):

	AGE DISTRIBUTION					
	TOTAL	UNDER 14	14-15	16-21	22-54	55 AND OVER
Recipients	127	1	0	4	81	41

Supplemental Payments Program (SPP):

	AGE DISTRIBUTION					
	TOTAL	UNDER 14	14-15	16-21	22-54	55 AND OVER
Recipients	15	1	0	1	1	12

Food Stamp Program (FS):

Total Recipients	7,615
Both Food Stamps and Public Assistance	2,114
Only Food Stamps	5,501

	AGE DISTRIBUTION				
	UNDER 14	14-15	16-21	22-54	55 AND OVER
Recipients	4,554	550	1,017	1,228	266

*Recipients are persons receiving assistance.

NOTE: See the Glossary for program definitions.

COCONINO COUNTY SERVICE DELIVERY AREA

The present economic base of Coconino County consists of tourism, government, forest products, and manufacturing. The tourism industry is very important in the summer months because it creates employment opportunities in services and trade industries. Cashiers, sales clerks, and food service workers will be employed in increasing numbers during the next two years. Tourism in northern Arizona was strong in 1986 and shall continue to expand in the future.

Employment in manufacturing is directly related with employment in construction because of the composition of manufacturing in the county. Manufacturing in Coconino County produces mostly lumber, wire, and cable. As construction activity accelerates in the state due to lower interest rates, production and maintenance workers, both skilled and unskilled, will be needed by the producers of these materials. Employment in manufacturing is expected to grow at a moderate rate in 1987 and 1988. The construction industry should be hiring increasing numbers of laborers, equipment operators, and skilled craft workers in both 1987 and 1988. Assemblers and technicians should find an increasing number of job opportunities within the Flagstaff area.

Despite the importance of tourism, manufacturing, and construction to the local economy, government remains the dominant employer in the county. Northern Arizona University (NAU) in Flagstaff is the largest employer in the public sector. NAU should provide additional job opportunities mostly for clerical staff, food service workers, and maintenance personnel.

The outlook for Coconino County is good as the economy is more diversified than the economies of most northern Arizona counties. As a result, employment growth should also be higher in Coconino County than other northern counties. Flagstaff will command most of the new jobs, but the warmer months will bring employment opportunities in increasing numbers to the Grand Canyon region as well as other recreation areas in the county.

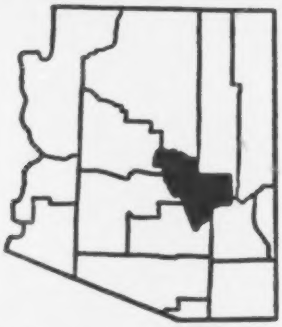
GILA COUNTY PORTION OF THE GILA/PINAL SERVICE DELIVERY AREA



Gila County has historically been dependent upon copper mining and smelting for employment. The persistent problems experienced by this industry have led to very high unemployment, especially in Miami and Globe. The primary causes of copper's employment decline include: higher quality foreign copper produced with lower costs, environmental clean-up costs, and weak demand for copper. The county is still facing employment cuts in the mining industry. The annual average employment as of July 1986 in mining is about 1,260 compared to the annual average of 2,050 workers in 1982. Over this same period, the labor force has declined by more than 4,500. This means that people have either given up looking for work and dropped out of the labor force, or have moved out of the county to look for work. Given the better employment opportunities in Maricopa and Pima counties, out-migration is the more likely alternative.

Government continues to be a major employer along with trade and services. Most of the jobs available in these industries will be for office clerks, secretaries, sales personnel, and food service workers. Separation and turnover create job openings for heavy equipment operators, laborers, and other workers in the building trades.

Presently, the county relies more heavily on tourist-related trade and services for its employment growth. The northern region around Payson contains mainly tourist-related industries. Payson's cooler climate and close proximity to the Phoenix area are making it a popular weekend vacation destination. This should continue to result in rapid employment growth in hotels, lodgings, restaurants, and other trade and service establishments. Population growth and home construction should create new jobs in the building trades as well as in the wood products industry. The health industry is also expanding in the Globe and Payson areas along with the growth in population, creating some demand for health-related occupations like nurses, nursing aides, and medical assistants.

Overall, the areas of Gila County that depend on copper mining could face more difficulties if the price of copper does not improve significantly. However, the opportunities for employment in the northern region of the county should be fairly good if the development of tourist activities continues.

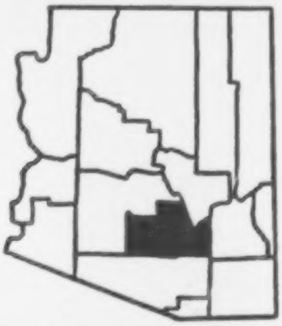
PINAL COUNTY PORTION OF THE GILA/PINAL SERVICE DELIVERY AREA



Pinal County's economy has historically depended upon copper mining, agriculture, and government for employment. Over the last four and one-half years, more than 4,000 jobs have been lost in mining and smelting. The structure of the economy, however, is in the process of transformation as the mining industry has been declining since 1982. The present economic base of the economy is a mixture of manufacturing, trade, mining, and government.

Government is by far the largest employer in the county, and much of the employment is related to the prison facility in Florence. The prison facility in Florence will have some potential for future job opportunities. Some of the more likely occupations that should provide openings include correction officer, clerk, and secretary. The openings, however, will be the result of turnover and separations since the number of new jobs that will be created is minimal.

Florence is, at the same time, an agricultural community, and completion of the Central Arizona Project Canal ensures a good water supply for this area which produces cotton, cattle, sugar, and other agricultural products.

With Pinal County's economy in the process of transformation, Casa Grande and Eloy continue to attract attention from manufacturers who are expanding, since these areas are ideally situated between Phoenix and Tucson and have a sizable labor force to draw upon. Several large companies will be adding new workers. Future growth in manufacturing will create a demand for managers, clerical personnel, skilled and semiskilled laborers, and construction workers. One other area of the county that is currently expanding rapidly is the town of Apache Junction. As population grows there, Apache Junction should continue to have a fairly strong demand for occupations in construction, trade, and services.

The economic outlook for Pinal County is good. It should realize better growth as the diversification process continues and as U.S. manufacturing and agriculture become more competitive in the national and global markets due to the declining value of the dollar.

GRAHAM COUNTY SERVICE DELIVERY AREA

There was no change in Graham County's wage and salary employment in the 12 months period ending July 1986. Virtually no sector of the economy showed any change in employment except agriculture and small family-owned businesses which together contributed about 300 jobs.

The economy of Graham County consists of agriculture, trade, and mining. While mining is not a major activity in the county, many of the people working in Clifton and Morenci live in Safford and spend their earnings on purchases in Safford. That is, Safford has functioned as a center for trade and commerce for both Graham and Greenlee counties. This remains true at the present time.

Employment in mining is projected to decline further in the future, and these job losses will have repercussions in additional job losses in other sectors of the economy as well. As a result, the labor force will continue to shrink unless some unforseen events cause employment to grow at a healthy rate.

Agriculture plays a similar role to mining. While agriculture does not employ a large number of people, it does create a demand for trade and services. Unfortunately, agriculture has not prospered as it has in years past. But the prospects are there for developing apple orchards in southern Graham County in the future.

Government is the largest employer in the county, with Eastern Arizona College in Thatcher and the federal prison and county government in the Safford area being the major employers. Government is expected to gain more jobs as a result of expansion of the prison facility. That facility is expected to offer employment in occupations such as janitor, clerical worker, security guard, corrections officer, and maintenance worker, with most of the openings due to separations and turnover.

Recovery of lost labor force and population may result partly from an improved general economy. This will lead to higher levels of construction, more tourism, and greater expenditure for goods and services. A new trailer park and RV park and new camping facilities at Roper Lake indicate increased tourist activities. The opening of a new nursing care facility in Safford will create additional demand for nurses, nursing aides, and medical record clerks.

The overall prospect for the economy does not seem to be encouraging because of the slump in the copper industry and the lack of possible diversification in the near future. Therefore, most of the job openings will be in government, trade, and services industries. Since the growth is not expected to be very strong, most jobs will be the result of turnover in relatively low-skilled occupations.

GREENLEE COUNTY SERVICE DELIVERY AREA

The economic base of Greenlee County is copper mining with almost two-thirds of all nonagricultural wage and salary employees working in either mining or smelting. Therefore, it is necessary to discuss the copper industry to analyze Greenlee County's economy.

The copper industry has been in a depressed state since 1982 when copper prices, and consequently employment, began to fall. The strike of copper mining workers against Phelps Dodge, the international market for copper, EPA anti-pollution regulations, and the reduction of the number of smelters at Phelps Dodge operations in Clifton and Morenci are the contributing factors in determining the future employment level in the county. Total employment in mining is currently around 1,650 compared to 2,625 in 1981. Smelting has experienced similar cutbacks. Any new employment in the industry will be virtually the result of separations and turnover rather than new jobs.

Government is the second largest employer in the county, with most job opportunities in clerical positions. Recently, the county has been trying to diversify its employment base. Manufacturing employment is expected to increase as the construction of a solvent extraction eletrowinning plant in Morenci is completed. During the construction phase, additional demand for laborers, equipment operators, and skilled craft workers will be created. If current efforts are successful, other manufacturing will be attracted to the area providing employment opportunities for technicians, assemblers, and maintenance workers.

While an abundance of new jobs is not expected in Greenlee County, the openings that occur will probably be in occupations such as laborers, trades helpers, electricians, truck drivers, managers, machinists, and plumbers.

The key to economic growth in the county is diversity. However, it must be emphasized that for any significant new employment to take place, the recovery of the copper industry is a necessary condition.

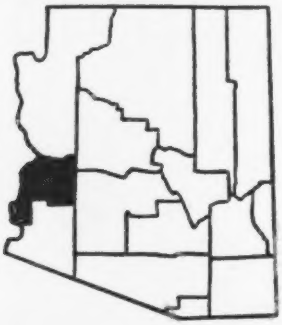
LA PAZ COUNTY PORTION OF THE LA PAZ/MOHAVE SERVICE DELIVERY AREA



Most of the economic activity occuring within the La Paz County boundary is centered in Parker. Although the La Paz Service Delivery Area does not include the reservation area in which Parker is located, Parker must not be overlooked in describing the labor market area in this region.

The economic base of La Paz County is primarily tourist-related trade and services. However, agriculture will continue to contribute to the local economy in creating employment. La Paz County has experienced a nominal increase in wage and salary employment over the 12 months ending in July 1986. The unemployment rate, however, has also gone up.

Parker is the center for commercial and recreational activities in La Paz County. The level of recreational activities on the Colorado River has been lower than expected, resulting in no growth in trade and services industries in the last 12 months ending July 1986. The sources of future economic growth vastly depend on the expected increase in the demand for recreational and water sports in Arizona and California, with most job opportunities in services and trade-related entry-level occupations.

County and city government in Parker added 50 jobs from mid-1985 to mid-1986. As population expands, the county should create additional job opportunities for secretaries, clerks, and office workers.

MOHAVE COUNTY PORTION OF THE LA PAZ/MOHAVE SERVICE DELIVERY AREA

The present economic base of the county has been a mixture of manufacturing and tourist-related services and trade, with manufacturing assuming an important role in recent years.

Lake Havasu City is the primary manufacturing center in the county. It is also heavily influenced by tourism and other recreational activities. The manufacturing of both durable and nondurable products has resulted in an additional 200 jobs in the last 12 months ending in July 1986. Should the U.S. manufacturers perform well in the national and international markets in the future, the manufacturers in Mohave County will also expand and provide additional employment opportunities for assemblers, maintenance mechanics, and laborers. Kingman also should have some growth in light manufacturing activities.

As in much of Northern Arizona, the towns on the Colorado River depend heavily on tourist activities to create employment opportunities. Growth of Laughlin, Nevada as a gaming and recreational center is providing job opportunities on both sides of the river for residents of Bullhead City and Riviera/Holiday Shores. In fact, Bullhead City is becoming the largest city in Mohave County. Development of a new bridge over the river may accelerate that trend. This growth will stimulate the retail trade and services industries, creating job opportunities for cashiers, food service workers, desk clerks, vessel operators, and other tourist-related occupations.

Kingman is the center for government and related job opportunities in the county. Employment opportunities should increase due to the increasing rate of growth of the local population. Most job openings will be in clerical positions as well as other basic public service occupations such as police, fire fighters, and educators. The high rate of tourist activities together with the growth in population also enhances the demand for hotels, motels, houses, and medical services. Major construction projects are currently underway or in the planning stages along the Colorado River. Most of these job openings will be entry-level positions for unskilled and semiskilled workers in the Colorado River communities.

The outlook for Mohave County is quite impressive. Growth in employment, however, will largely depend on tourist activities along the Colorado River.

BALANCE OF MARICOPA COUNTY SERVICE DELIVERY AREA

The balance of Maricopa County has diversified its industrial base in recent years. This diversity, including activities such as electronics and aerospace manufacturing, financial services, tourism, and trade will contribute to the future growth and stability of the economy.

Several factors have contributed to the loss of momentum by the county economy in 1986. The high technology sector has been slowed by low product demand, high inventories, and intense international competition, resulting in many layoffs. It is expected that these firms, both nationally and locally, will be adding workers again by the end of this year. Producers of defense-related products are hiring assemblers and technicians nearly as rapidly as last year and should continue to do so unless cutbacks are forced by the Gramm-Rudman-Hollings' proposal to balance the budget.

Growth in construction will be spurred by lower interest rates and strong population growth. On the one hand, the widely reported surplus of office space in the county may result in lower growth in commercial construction employment during 1987; while the rapid population growth, along with lower interest rates, will sustain residential construction employment. Massive road building activities should also help to offset losses caused by lower office construction. Therefore, the industry, in general, will continue to add more laborers, equipment operators, electricians, plumbers, and carpenters in the near future. But these demands will not be as great as they were in 1984 and 1985.

Rapid population growth in the balance of Maricopa County has stimulated growth in the trade and services industries. Jobs will continue to be created for clerical workers, sales personnel, managers, drivers, and food service workers in these industries. Financial and real estate services also are expanding and providing opportunities for tellers, office clerks, and loan officers. High growth in finance has been influenced by refinancing activities caused by lower interest rates. Once the financial institutions complete the bulk of their refinancing activities, the industry should slow in late 1987. Tourism also has had a major impact on these industries. Landscapers, housekeepers, and desk clerks are among the occupations that will be in demand in hotels and lodging, an industry that will benefit both from increased tourism and increased business and convention activities.

In general, the balance of Maricopa County is expected to remain strong for years to come, with the most employment growth in the trade and service industries, and manufacturing regaining its vigor in 1987 and 1988.

CITY OF PHOENIX SERVICE DELIVERY AREA

Phoenix has enjoyed rapid growth in employment during the last three years. The economic base is similar to the balance of Maricopa County. As the state capitol and major urban center, Phoenix has a high concentration of jobs in government and in business and financial services. The city also includes some areas of unemployment and poverty which are more extensive than those outside the city.

As mentioned above, business, financial services, and government are major employers in the city. While government budgets are not expected to allow a large number of new jobs to be added, turnover and separation should result in openings for clerks, secretaries, and maintenance workers. The large number of business offices located in Phoenix will create additional demand for clerical workers, secretaries, and computer operators. Likewise, Phoenix should also have a number of openings for services and trade occupations such as food service workers and sales clerks.

Construction employment in Phoenix will decline as most of the commercial and industrial construction projects are being completed. But massive road building activities should help to offset losses caused by lower office construction and recent layoffs at the Palo Verde Nuclear Power Plant in the Phoenix area. Also, the rapid population growth, along with lower interest rates, will sustain residential construction.

Manufacturing employment will follow a pattern similar to the rest of the county. Electronic manufacturers should see a recovery in sales of their products by late 1986 or early 1987, while defense contractors will continue to hire assemblers and technicians in the near term.

Although the rate of growth will not be as spectacular as in the recent past, the diverse economy of Phoenix will create a wide variety of employment opportunities in the next two years.

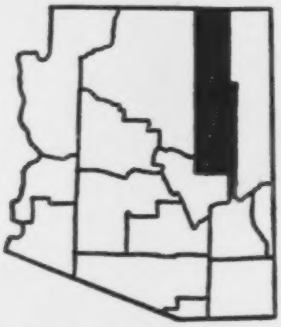
NAVAJO COUNTY SERVICE DELIVERY AREA



The economic base of Navajo County consists mostly of services, trade, government, and wood products. Increased employment opportunities in these areas have caused unemployment to decline from mid-1985 to mid-1986.

Most of the employment opportunities in the trade and service areas depend on the level of tourist activities. Several motels, RV parks, and shopping centers are currently under construction in Show Low, Winslow, and the Pinetop/Lakeside area. If the national and state economies perform fairly well in the coming years, Navajo County will experience growth due to the area's increasing popularity throughout the year as a destination for in-state tourists. Most of the job opportunities will be in food service, clerical, and various semi-skilled occupations.

Most of the manufacturing employment in Navajo County is in lumber and wood products. Employment growth in lumber and wood products largely depends on the growth in the construction industry. The construction industry should grow further in the near future as interest rates are expected to remain at low levels. Another contributing factor is the state's ability to attract more people from other states. Growth in Arizona's population will create additional demand for housing and demand for lumber to build that housing. This could result in some openings for heavy equipment operators, truck drivers, and other logging-related occupations.

The county should see an increase in employment opportunities in the transportation, communications, and public utilities sector as the operation of Unit V of the Cholla power plant begins in the near future. The new facility will create some employment opportunities in various construction-related occupations.

The economy of Navajo County is progressing very gradually. As a result, most employment opportunities will come from gradual growth and turnover in government, construction, lumbering, and tourist and population-serving industries. More industry needs to be attracted to the county in order to have better employment opportunities in the years ahead.

PIMA COUNTY SERVICE DELIVERY AREA

Pima County has experienced a large increase in employment during 1985 and 1986. The economic outlook for the county looks quite impressive in the coming years as the economy diversifies its dominant sources of employment. The economic base once dominated by copper mining has shifted toward more manufacturing and tourist-related employment.

The process of transformation began before employment in mining declined. Copper mining employment has fallen steadily in recent years. In July 1986, employment was 1,600 compared to 7,800 just six years ago. This trend is expected to continue in the near future due to the low price of copper in international markets and intense competition from substitute materials and from copper produced outside the United States. However, the county's increasingly diverse economy should manage to mitigate the problems created by dismal conditions in the copper industry and the weakened Mexican economy.

Manufacturing plays an important role in Pima County's economy. Manufacturing employment in the metropolitan Tucson area has more than doubled in the past ten years. This growth has been due to the rapid increase in high technology manufacturers locating and expanding in the Tucson area. A large portion of manufacturing is producing defense-related equipment, thus ensuring continued demand for assemblers and technicians unless cutbacks are forced to balance the budget. The nondefense electronic goods producers will also add workers as the U.S. manufacturers, in general, start realizing the effects of recent dollar depreciation and become more competitive in the international market.

The industries that should provide the largest employment growth are services and trade. The growth in these two industries will mostly come from growth in tourism. The services industry has experienced explosive growth in the Tucson area in the last two years. Two industries in particular, hotels and lodging and business services, led the way. The building of new hotels and resorts is enhancing the ability of Tucson to attract a larger share of the tourist and convention business which traditionally has gone to other areas. Business services will be an important source of employment growth in the future. It includes activities such as building maintenance and security, temporary help agencies, and accounting and advertising firms. Consequently, jobs will continue to be created for clerical workers, sales personnel, managers, drivers, and food service workers in these industries.

The construction sector should experience modest growth this year as opposed to 1985's record growth. Relatively low interest rates on home mortgages along with strong population growth will keep home building at a high level

Continued - Pima County

and will absorb the temporary reduction in nonresidential construction. Therefore, the industry, in general, will continue to add more laborers, equipment operators, electricians, plumbers, and carpenters in 1987 and 1988.

Considering all these factors, the prospects for employment growth in Pima County remain very good in the coming years.

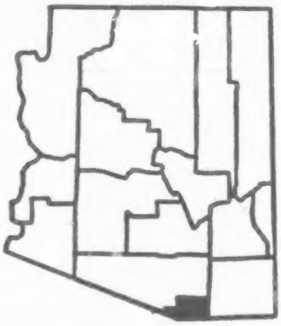
SANTA CRUZ COUNTY SERVICE DELIVERY AREA



The economic base of the county consists primarily of retail and wholesale trade, with a growing manufacturing sector. It experienced an increase in wage and salary employment of 650 over the 12 months ending in July 1986. Unemployment also improved from the rate of 20.3 percent in July 1985 to 16.8 percent in July 1986.

The economic activity of Santa Cruz County is centered around Nogales where approximately 90 percent of the county's population resides. Nogales' proximity to Mexico makes it a major trade center of the state. Retail trade is by far the county's biggest industry, and Mexican nationals make up a large portion of the retail market. But the poor exchange rate of pesos to the dollar has weakened the economy of Nogales and the county for the last few years. Should Mexico's economy improve during the coming years, new jobs will be available for sales clerks, food service workers, stock clerks, and office workers.

Nogales is also one of the major shipping centers for fresh fruits and vegetables entering the U.S. which largely determines the level of wholesale trade. As a result, opportunities exist for truck drivers, equipment operators, and general laborers. Since this activity is highly seasonal, many jobs are available only during winter and spring. However, the prospects are very good for wholesale trade and distribution in the coming years.

Manufacturing employment in Santa Cruz has increased by more than 400 from mid-1985 to mid-1986. In recent years, manufacturing has increased significantly in the Nogales area. If current trends continue, other manufacturers also will be attracted to the area, providing employment opportunities for technicians, assemblers, and maintenance workers.

The outlook for Santa Cruz County is good. Its ability to expand the manufacturing base and wholesale trade will determine the future level of employment growth.

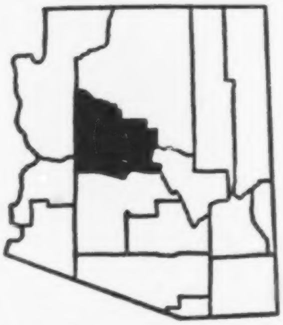
YAVAPAI COUNTY SERVICE DELIVERY AREA



The economic base of Yavapai County consists primarily of tourism, lumber, and some manufacturing activities. Its proximity to Arizona's metropolitan areas ensures continued rapid expansion in tourism-related occupations. As a result, employment should grow in the trade and services sectors of the economy, especially in the Verde Valley-Sedona area. Jobs should be available in motels, restaurants, retail businesses, and recreation services for cashiers, service workers, clerks, and maintenance workers.

The manufacturing industry is dominated by both lumber and electronic products-related employment. Manufacturing is expected to grow at a higher rate in 1987 and 1988 as the U.S. producers of electronic products become more competitive in the global market. Secondly, as the construction industry grows in the future along with population growth, employment opportunities related to wood products will also increase.

Construction of motels and nursing homes will create employment opportunities in different service and trade-related occupations, e.g., cashiers, managers, food service workers, nurses, and nursing aides. Increased demand for second homes in Prescott and Sedona is expected to increase construction in the next two years. This will also spur employment opportunities in the finance, insurance, and real estate industry.

Some jobs will be created as the population expands in the county generating an increased demand for basic public services such as police, fire protection, and education. Government employment is expected to increase as a result of constructing a federal aviation administration flight station at Prescott.

Ups and downs in the copper mining industry in Bagdad does not affect the local economic activities as much as before. The outlook for the overall economy is impressive. The future growth, however, will depend on its continuing diversification and the performance of the state and national economies.

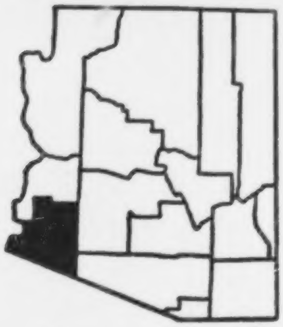
YUMA COUNTY SERVICE DELIVERY AREA



The economic base of Yuma County consists primarily of agriculture and tourist activities. Employment opportunities in both of these industries are subject to seasonal variation. Increasing activity along Interstate 8 between the growing metropolitan areas of Arizona and California will contribute to a rising level of employment opportunities in services and trade industries. Most of these job opportunities will be in the county's restaurants and motels, mostly for cashiers, food service workers, desk clerks, and housekeepers.

The other major industry in the county is agriculture which generates even more seasonal job opportunities in picking, packing, warehousing, and shipping. Yuma is also a major distribution center for Mexican fruits and vegetables during the winter months. The border trade largely depends on the state of the Mexican economy. Should the Mexican economy improve, more border trade will take place. Employment in the trade industry increased in the 12 months ending in July 1986. Agriculturally-related businesses providing equipment and services to fruit and vegetable operations in the county will provide some jobs for maintenance mechanics and laborers in the future.

Manufacturing employment in Yuma County has been growing at a slow rate. Some jobs will be available for technicians and production workers as the county's small manufacturing base grows. Yuma's climate, comparatively low wages, and access to Interstate 8 should attract more manufacturing and warehousing businesses in the future.

Yuma's growing population will also lead to a rise in government employment. Most new jobs will be for teachers and maintenance workers in the local schools or the community college. The new prison facility in the county will also create demand for correction officers, clerks, and secretaries. Increased federal spending will enhance opportunities for electronic and communications technicians at military facilities.

In summary, Yuma County continues to move through a transition from a rural agricultural economy to an economy based on manufacturing, trade, and services. The gradual expansion of tourist-related services and growth in wholesale trade will help the local economy provide employment opportunities in the future.

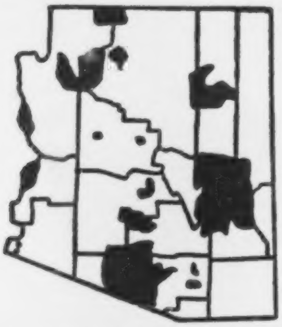
TRIBAL SERVICE DELIVERY AREA



In the state of Arizona, the Tribal Service Delivery Area (Tribal SDA) is comprised of 20 reservations located throughout the state. Currently, the Arizona Department of Economic Security serves as Grant Recipient for the Tribal SDA. Eight tribal governments and the Indian Development District of Arizona serve as administrative entities, contracting with the State of Arizona to provide JTPA services on the reservations. The Tribal SDA's Title II-A and II-B allocation is suballocated to its administrative entities based on a population formula.

Within the Tribal SDA, the traditional arts and crafts (i.e., silver and turquoise jewelry, pottery, basket or textile weaving, rug weaving, fine arts, painting, etc.) still exist, but they do not portray a true economic picture of the labor force in this area. Self-employment opportunities, except for a few well-known crafts persons, are generally seasonal. No significant change is anticipated for this group in the near future.

The construction-related jobs on most reservations have been on a gradual increase during the past two years. The home construction and improvement program through HUD, along with the BIA-sponsored road improvement and highway construction, will continue demand for laborers and apprentices and journeymen in both building trades and highway construction for the next two years.

The various social, health, education, and job training programs/projects funded by local, state, and federal governments comprise more than 90 percent of all available employment. Recent federal government budget reductions resulted in a layoff of employees on most reservations. Simultaneously, the tribal governments were also experiencing financial difficulties due to their financial status which resulted in additional layoffs of tribal employees in order to deal with this unique problem.

The lower skill-level positions are saturated and stable. Conversely, there is a high turnover of professional-level personnel in jobs for which few residents are qualified. Unfortunately, outside skilled labor have been filling the vacancies in the professional (both social and educational) as well as the technical specialist positions that require four-year college degrees and graduate level work. Very few reservation residents currently meet these requirements.

There are a limited number of employers in the private sector, including the tribe-owned enterprises. Reservation residents often consider employment in this area as a last resort only if better opportunities are not secured. There

Continued - Tribal

is a tendancy toward constant turnover in these jobs as employees find more attractive career opportunities. No significant growth in the private sector is anticipated in the near future.

NAVAJO NATION SERVICE DELIVERY AREA

The Arizona Navajo Service Delivery Area, located in the northeastern quadrant of the state, covers approximately 15,664 square miles or roughly more than 10 million acres. It occupies the major portions of Apache and Navajo counties and approximately a third of Coconino County.

The Navajo Nation delivers services through governmental subunits representing five major geographical regions referred to as agencies. These agencies are subdivided into districts and chapters. The chapters are the local units of government comprised of one or several small communities; combinations of several chapters comprise districts. The Arizona portion of the Navajo Nation is served by four agencies (Tuba City, Chinle, Fort Defiance, and Shiprock). Boundaries of the Shiprock Agency extend into New Mexico, as does Tuba City into Utah. A total of 58 chapters make up the Navajo JTPA Service Delivery Area in Arizona with population of 99,131. The remaining Navajo Nation resident population of 70,034 are located in Utah and New Mexico.

The Navajo Nation faces the task of the development of infrastructural, economic, and community facilities, and the general development projects to accommodate its population growth and needs. About 66 percent of total Navajo employment is in government and services. Transportation/communications/ utilities over the last two years have increased by 25 percent to account for approximately 15 percent of employment. This sector is likely to continue increasing and remain stable as Navajo Tribal enterprises are cable television and telephone trucklines; ensuring services are being increased in both rural and "growth" communities. In addition, output of three electrical power generating plants to meet off-reservation/out-of-state consumer needs has increased. The combination of coal mining and construction industries will likely remain stable as their growth or decline is influenced by international price-fixing and federal appropriations for new roads, schools, hospitals, and the tribe's commitment toward public facility improvement with its Capital Improvement Program.

The basic goal of the Navajo JTPA programs is to provide the Navajo people with the training and employment experience that will make certain they are aware of the world of work and prepare them for the employment opportunities that are or will become available. As employment opportunities become available on the reservation, the Navajo Division of Labor must assure that the Navajo people are prepared to take advantage of these opportunities.

Thus, it is the intent of the Navajo Nation, through the Arizona Navajo Nation Service Delivery Area to promote the fullest use of training and retraining resources for the reservation work force and to strengthen the

Navajo economy by improving both the public and private sectors. Recognizing that, relative to the characteristics of the SDA, emphasis will be placed upon appropriate job training directed at growth occupations. Adequate support will be provided for members of the work force and potential work force who are unable to benefit from traditional private and public sector training without additional assistance.

APPENDICES

(County Data; Information Not Available at SDA Level)

APPENDIX A

POVERTY INCOME GUIDELINES
EFFECTIVE FEBRUARY 11, 1986

FAMILY SIZE	POVERTY GUIDELINES
1	$ 5,360
2	7,240
3	9,120
4	11,000
5	12,880
6	14,760

For each additional family member add $1,880.

SOURCE: U.S. Department of Health and Human Services, February 1986.

LOWER LIVING STANDARD INCOME LEVEL
(70 PERCENT LLSIL)
EFFECTIVE APRIL 30, 1986

FAMILY SIZE	METROPOLITAN INCOME	NONMETROPOLITAN INCOME
1	$ -NA-	$ -NA-
2	7,700	7,850
3	10,570	10,780
4	13,050	13,310
5	15,400	15,710
6	18,010	18,370
For each additional person add. . .	$2,610	$ 2,660

NOTE: These figures are only for the purpose of determining eligibility for JTPA programs and should not be used for any other statistical purposes. Since the Bureau of Labor Statistics has not revised the lower living family budget (on which the LLSIL is based) since 1981, ETA used consumer price index changes to update the LLSIL to meet JTPA requirements.

Navajo Nation SDA	6,799	19,086	55.36	x .40 + 40	62.14
UNITED STATES	5,417,178	23,625,720			

The adjustment factor is calculated by dividing the ratio of the local economically disadvantaged youth to adults by the national ratio (22.93 percent) and substracting 1 from the result.

((Local ED Youth/Local ED Adults)/(National ED Youth/National ED Adults)) - 1 * 100 = Adjustment Factor

The adjustment factor represents the magnitude of the difference between economically disadvantaged persons in the local SDAs with the same individuals nationally and it affects the amount allocated for services for youth, which is increased or reduced proportionally by the factor.

GLOSSARY OF TERMS AND CONCEPTS

Aid to Families with Dependent Children (AFDC)
Provides financial assistance to children deprived of support or care due to death, divorce, absence, or disability of one or both parents. It also provides for rehabilitation and job placement for children and parents through the Work Incentive Program (WIN) and referral to Vocational Rehabilitation or to Job Service, and for children and/or family services.

Civilian Labor Force
All persons, 16 years of age and over, who are not in institutions nor in the Armed Forces, and are either "employed" or "unemployed."

Confidentiality Rules for Unemployment Insurance Data
Data cannot be released without written consent if one of the following are true:

1) There are fewer than three firms in an industry.
2) If there are three or more firms and one firm accounts for 80 percent or more of the employment in that industry.

Current Employment Statistics (CES) Survey
A cooperative effort between Arizona and the United States Bureau of Labor Statistics which produces monthly estimates of employment, hours, and earnings information.

Dislocated Worker
An individual who 1) has been laid-off or has received a notice of lay-off, is eligible for or has exhausted unemployment compensation, and is likely to return to the previous industry or occupation; 2) has been laid-off or has received a notice of lay-off as a result of a permanent closure of a plant or facility; or 3) is long-term unemployed and has limited opportunities for employment in the same or similar occupation in the area where the individual resides, including an older individual with substantial barriers to employment by reason of age.

Displaced Homemaker
A person who was a full-time homemaker for a substantial number of years and derived a substantial share of his/her income from: A) a spouse, and no longer receives such support due to death, divorce, legal separation, or the certified disability of the spouse by a physician; B) a spouse who is permanently disabled and who is receiving disability compensation under the U.S. Social Security Act or a state Workmen's Compensation law; or C) public assistance based on having dependent children, but no longer qualifies for such support.

Dropout
An individual who is neither attending school nor subject to a compulsory attendance law and has not received a secondary school diploma or a certificate from a program of equivalency for such a diploma.

Econometric Model
A system of mathematical equations used to forecast economic conditions and to investigate alternative economic scenarios.

Economically Disadvantaged
For JTPA purposes, an individual who is a member of a family which receives public assistance or whose family income does not exceed the higher of either the poverty level as determined by the Office of Management and Budget or 70 percent of the Lower Living Standard Income Level (LLSIL). Data obtained from the 1980 Census refers only to the poverty level.

Employed
Individuals, 16 years of age and older, who are working as paid employees, are self-employed, or work 15 or more hours as unpaid workers in a family business. Also included are those who are temporarily absent from jobs or businesses due to illness, bad weather, vacations, labor disputes, or personal reasons.

Food Stamp Program
Provides low-income households with increased food purchasing power to enable them to obtain a more adequate nutritional diet through a federal program regulated by the U.S. Department of Agriculture. DES administers the distribution of food stamp coupons that may be exchanged in normal retail grocery outlets for food items.

General Assistance
Provides financial aid to persons who are unemployable because of a temporary physical or mental disability; persons permanently disabled, but not receiving Supplemental Security Income benefits; persons required in the home to care for a disabled relative; and families with foster children, age 18-21, continuing their education.

Health Condition
A physical or mental problem which has lasted for six months or more.

Industry
A distinct group of productive or profit-making enterprises, such as manufacturing, retail trade, or services. Indistries or industrial groups used here are defined in the Standard Industrial Classification Manual 1972 of the U.S. Office of Management and Budget.

Job Training Partnership Act (JTPA)
A federal act, passed in 1982, designed to establish programs to prepare youth and unskilled adults for entry into the labor force and to provide job training for economically disadvantaged individuals and others suffering serious barriers to employment.

Labor Market Area
An economically integrated geographic area within which individuals can reside and find employment within a reasonable distance or can readily change employment without changing their place of residence.

Native American Reservations
Geographic areas with boundaries established by treaty, statute, and/or executive or court order.

Nonservice-Connected Disability Pension
Paid to veterans of wartime service who are permanently and totally disabled due to nonservice-connected disabilities or are age 65 or older and whose incomes fall below certain qualifying levels.

Not in the Labor Force
Persons who are not seeking employment or are unable or unavailable to work regardless of the reason, e.g., homemakers, children less than 16 years of age, students, retirees, or institutionalized persons.

Occupation
An activity which serves as one's regular source of livelihood, such as welding, mechanical engineering, or elementary school teaching.

Population
The number of inhabitants in an area.

Private Industry Council (PIC)
A group of individuals, within each JTPA SDA, representing private business, organized labor, educational agencies, rehabilitation agencies, community-based organizations, economic development agencies, and the public employment service. Their major duties are to provide policy guidance for JTPA activities and the oversight of those activities.

Refugee
An alien who, because of persecution or fear of persecution on account of race, religion, or political opinion, fled from his/her home country and cannot return there because of fear of persecution on account of race, religion, or political opinion.

Research Administration
Established in April 1984 within the Arizona Department of Economic Security to consolidate Labor Market Information, Unemployment Insurance Research, and the Arizona State Occupational Information Coordinating Committee.

Service-Connected Disability Compensation
Indemnifies veterans for the loss of earning capacity caused by disease or injury which was incurred or aggravated during military service.

Service Delivery Area (SDA)
A designated area within Arizona which receives JTPA funds based upon a formula and uses those funds to establish employment and training programs.

State Job Training Coordinating Council (SJTCC)
A thirty-member council which advises the Governor on the operation of JTPA programs within the state.

Supplemental Payments Program (SPP)
Provides payments to eligible aged, blind, or disabled persons who qualify for nursing home care or licensed supervisory home care. The recipient must be receiving Supplemental Security Income (SSI) or precluded from receiving SSI solely because he resides in a public nursing home. The SPP (a state program) data do not include any SSI (a federal program) payment data.

Unemployed
Individuals, 16 years of age and older, who are not working, but are looking for work and are available to work. Looking for work requires specific efforts such as sending resumes or canvassing employers. Discouraged workers (those who have given up looking for work because they feel there are no jobs available) are not counted as unemployed.

Unemployment Rate
Percent of the labor force that is unemployed. It is calculated by dividing the number unemployed by the labor force, and multiplying the result by 100.

Work Disability
A health condition which limits the kind or amount of work, or prevents working at a job or business.

(New) Yuma County/(Old) Yuma County
In 1983, La Paz County was created from part of Yuma County. (New) Yuma County refers to Yuma County after the division. (Old) Yuma County refers to Yuma County before the division.

Dear API User:

Enclosed is a copy of the Annual Planning Information (API) publication for program year 1987-1988. Also included are supplements on education and unskilled workers. At a later date, you will receive supplements on growing/declining industries and occupations plus a copy of the publication, Occupational Employment Forecasts.

If you have any questions concerning the API, please contact Barbara Keene at (602) 255-3871.

Sincerely,

Dan Anderson

SUPPLEMENT III
GROWING INDUSTRIES AND OCCUPATIONS

The following list of growing industries was determined by using multiple data sources, including Unemployment Insurance reports, Current Employment Statistics data, and local periodicals. A seven-year span, from 1980 through 1986, was used in order to negate the effects of the business cycle. Within each county, the industries are arranged in descending order based on the amount of employment growth from March 1982 to March 1986.

The corresponding list of occupations was determined by examining Occupational Employment Statistics (OES) data. Occupations with the highest employment levels are given for each growing industry and are listed in descending order. Occupations are only listed if doing so will not violate the confidentiality standards of the OES program.

SOURCE: Arizona Department of Economic Security, Research Administration, May 1987.

GROWING INDUSTRIES

APACHE COUNTY
- Communications and Public Utilities
- Automotive and Service Stations (Retail Trade)
- Medical and other Health Services
- Miscellaneous Retail Trade

SUPPLEMENT IV
DECLINING INDUSTRIES AND OCCUPATIONS

The attached list of declining industries was determined by using multiple data sources, including Unemployment Insurance reports, Current Employment Statistics data, and local periodicals. A seven-year span of information, from 1980 through 1986, was used in order to negate the effects of the business cycle.

The corresponding list of occupations was determined by examining Occupational Employment Statistics (OES) data. For each declining industry, those occupations having greater than a third of their employment in the declining industry of that county are included. Those occupations with a third or less of their employment in the declining industry can be expected to have other opportunities for employment within the labor market. In addition, occupations were listed if they were within the ten occupations with the highest numbers of employees in that declining industry. However, an occupation was not listed if it contained fewer than five employees in an industry. Occupations are only listed if doing so will not violate the confidentiality standards of the OES program. The occupations are listed in descending order by employment level.

SOURCES: Arizona Department of Economic Security, Research Administration, May 1987.

DECLINING INDUSTRIES

APACHE COUNTY
None
